

**Year 2003 Annual Report and
Annual Energy Savings Claim**

October 8, 2004

255 South Champlain Street, Suite 7
Burlington, Vermont 05401-4894
1-888-921-5990

www.encyvermont.com

This report is submitted October 8, 2004, to the Vermont Department of Public Service and the Efficiency Vermont Contract Administrator. It is provided both in fulfillment of the contractual requirement for the submission of Efficiency Vermont's annual savings claim and as the Annual Report for the Year 2003.

Year 2003 Annual Report and Annual Energy Savings Claim Table of Contents

1. Narratives	1
1.1.1. Business Energy Services Narrative	1
1.1.2. Residential Energy Services Narrative	11
2. Overall Services and Initiatives Results	17
2.1.1. Services and Initiatives Summary	17
2.1.2. Services and Initiatives including Customer Credit	18
2.1.3. Services and Initiatives excluding Customer Credit	19
2.1.4. Efficiency Vermont Services & Initiatives – End Use Breakdown	20
2.1.5. Efficiency Vermont Services & Initiatives – Utility Breakdown	21
2.1.6. Efficiency Vermont Services & Initiatives – County Breakdown	22
2.1.7. Efficiency Vermont Services & Initiatives – Total Resource Benefits	23
2.1.8. Business Energy Services – Summary	24
2.1.9. Business Energy Services – End Use Breakdown	25
2.1.10. Business Energy Services – Utility Breakdown	26
2.1.11. Business Energy Services – County Breakdown	27
2.1.12. Residential Energy Services – Summary	28
2.1.13. Residential Energy Services – End Use Breakdown	29
2.1.14. Residential Energy Services – Utility Breakdown	30
2.1.15. Residential Energy Services – County Breakdown	31
2.1.16. Cumulative Distributions by Customer Sector	32
2.1.17. Cumulative Distributions by County	33
2.1.18. Cumulative Distributions by Utility Service Territory	34
2.1.19. 2003-2005 Minimum Performance Requirements	35
3. Detailed Services & Initiatives Results	36
3.1.1. Business New Construction - Summary	36
3.1.2. Business New Construction - End Use Breakdown	37
3.1.3. Business New Construction – Utility Breakdown	38
3.1.4. Business New Construction - County Breakdown	39
3.1.5. Business New Construction – Total Resource Benefits	40
3.1.6. Business Existing Facilities - Summary	41
3.1.7. Business Existing Facilities – End Use Breakdown	42
3.1.8. Business Existing Facilities – Utility Breakdown	43
3.1.9. Business Existing Facilities – County Breakdown	44
3.1.10. Business Existing Facilities – Total Resource Benefits	45
3.1.11. Business Initiatives – Summary	46
3.1.12. Residential New Construction – Summary	47
3.1.13. Residential New Construction – End Use Breakdown	48
3.1.14. Residential New Construction – Utility Breakdown	49
3.1.15. Residential New Construction – County Breakdown	50
3.1.16. Residential New Construction – Total Resource Benefits	51
3.1.17. Efficient Products – Summary	52
3.1.18. Efficient Products – End Use Breakdown	53

3.1.19.	Efficient Products – Utility Breakdown.....	54
3.1.20.	Efficient Products – County Breakdown.....	55
3.1.21.	Efficient Products – Total Resource Benefits.....	56
3.1.22.	Residential Existing Buildings – Summary.....	57
3.1.23.	Residential Existing Buildings – End Use Breakdown.....	58
3.1.24.	Residential Existing Buildings - Utility Breakdown.....	59
3.1.25.	Residential Existing Buildings - County Breakdown.....	60
3.1.26.	Residential Existing Buildings - Total Resource Benefits.....	61
3.1.27.	Residential Initiatives – Summary.....	62
4.	Appendices.....	63
4.1.	Customer Credit Program.....	65

4.2.2.	Definitions and Report Template.....	71
4.2.3.	Table End Notes.....	76
4.2.4.	Re-mapping of Programs to Market Services and Initiatives.....	77

1.1.1. BUSINESS ENERGY SERVICES

Vermont businesses increasingly worked with Efficiency Vermont to pursue improvements in profitability and performance through energy efficiency in 2003. In addition to assisting individual businesses, Efficiency Vermont continued its efforts to transform Vermont's business market by enabling greater implementation of cost-effective energy efficiency. In order to achieve this goal, Efficiency Vermont initiated, maintained, and enhanced strategic working relationships with numerous design professionals, trade allies, business and trade associations, economic development organizations, and financial institutions. By leveraging the knowledge, contacts, and resources of these strategic partners, while continuing direct service to individual businesses, Efficiency Vermont was able to have an impact on larger portions of the business market.

In 2003, Efficiency Vermont completed projects with 638 Vermont businesses, helping them to make new investments in efficiency that will strengthen their bottom lines by reducing energy costs. Together, these businesses are expected to save more than \$28,847,000 over the lifetime of the energy efficiency measures installed in 2003. This brings the total lifetime economic value Efficiency Vermont has helped local businesses realize since its inception in 2000, to \$61,302,000. Lifetime economic value is defined as the present value of the electricity, fossil fuels and water that are saved over the lifetime of the efficiency measures.

PARTNERSHIPS ACROSS THE BUSINESS MARKET

Direct customer contact and relationships continue to be cornerstones of Efficiency Vermont's work. To help meet the energy needs of the commercial and industrial businesses in the state, Efficiency Vermont recognizes the need to develop partnerships in business markets that increase resources Vermonters can work with for energy efficiency.

Efficiency Vermont has maintained relationships with the design community, while collaborating with architects and engineers to develop training and tools to improve energy-efficient design. Working with refrigeration vendors and their trade association -- Refrigeration Service Engineering Society -- Efficiency Vermont developed and implemented a new initiative to increase the market penetration of high efficiency refrigeration equipment while streamlining participation. In 2003, a group of heating, ventilation, and air conditioning (HVAC) installers participated in a series of meetings at Efficiency Vermont to identify ways to partner in the promotion and installation of high-efficiency HVAC equipment. Working with partners such as these, increases the likelihood that energy efficiency will be incorporated into a building design or that the sale of a energy-efficient product or system will take place. Consequently, it also increases the adoption of energy-efficient approaches.

In addition to working with partners who have direct impact on customer decisions regarding their buildings, Efficiency Vermont worked closely with economic

development agencies and business associations to pursue energy efficiency opportunities for their constituencies.

In partnership with business associations, Efficiency Vermont also conducted several training sessions for customers to increase business owners' understanding of the energy efficiency opportunities in their facilities. These business associations included:

- Vermont Ski Areas Association (motor systems maintenance and improvements);
- Green Mountain Water Environment Association (case studies of successful variable frequency drive projects at municipal wastewater treatment facilities)
- American Society of Heating, Refrigerating and Air-Conditioning Engineers, with co-sponsorship by local HVAC design and contracting firms (advanced variable air volume system design).

These partnerships increase the adaptation of energy efficiency in the market by using existing meetings and organizations to provide businesses with an unbiased look at available opportunities and benefits.

Efficiency Vermont also worked closely with the U.S. Department of Agriculture's Vermont office of Rural Development to inform and assist Vermont farmers in pursuing federal grants for energy efficiency and renewable energy. Despite working within a tight timeframe through a complex federal grant process, two Vermont farms successfully applied for and received a 25% federal cost share on energy improvements in their facilities.

In partnership with the Vermont Environmental Assistance Program, Vermont Manufacturing Extension Center, the Barre Granite Association, and the Vermont Department of Public Service, Efficiency Vermont applied for and received an *Industries of the Future* grant from the U.S. Department of Energy. This grant is to be used to provide technical and financial assistance to the Barre granite industry. The Vermont Department of Public Service will administer the grant funds.

For its work, Efficiency Vermont was recognized with awards from two partner organizations:

- The Vermont Chapter of the Construction Specifications Institute granted a Cooperation Award in recognition and appreciation of Efficiency Vermont's significant involvement and support of the chapter, as well as its monthly programs.
- The Green Mountain Water Environment Association awarded Efficiency Vermont its Corporate Sponsor Award for support of water and wastewater operators and facilities across Vermont.

In addition to its Vermont alliances, Efficiency Vermont has maintained key regional and national partnerships that further Vermont's progress in cost effectively promoting energy efficiency.

- Vermont's leadership in addressing energy issues in multifamily housing received national exposure. Efficiency Vermont staff presented at three sessions and participated in two panel discussions at the "Multifamily Buildings 2003" national multifamily housing conference held in New York. One of these panels addressed ENERGY STAR labeling for multifamily facilities built under the commercial code. As a result of the panel discussion, Vermont is now participating in a national initiative led by the Consortium for Energy Efficiency (CEE) to assist the U.S. Environmental Protection Agency in developing ENERGY STAR standards for multifamily commercial construction.
- Because of its experience in successfully piloting new High Performance T-8 lighting technology at Barnet Elementary School and Stowe High School, Efficiency Vermont was asked to give a presentation on the technology at a CEE meeting. As a result, CEE formed a committee, including Efficiency Vermont staff, to develop a national specification for the High Performance T-8 system.
- Efficiency Vermont worked closely with the Northeast Energy Efficiency Partnerships (NEEP), CEE, the New Buildings Institute and administrators of other efficiency programs in the region to develop and begin implementation of the Energy Benchmark for High Performance Buildings (E-Benchmark); a national building design standard. At a regional meeting on the E-Benchmark and new construction, attended by leading program administrators in the northeast region, Efficiency Vermont was ready and able to immediately integrate this new tool into its services. By being at the forefront of the industry, Efficiency Vermont can influence regional and national practices and standards, thus improving the consistency and quality of building design and construction.

Efficiency Vermont continues to support and actively participate in several regional market transformation initiatives coordinated by NEEP. These initiatives include:

- Motor Up - promoting the benefits of premium efficiency motors;
- Cool Choice - encouraging and assisting the business market to install high efficiency air conditioning systems;
- Design Lights Consortium - promoting the benefits of high quality, energy-efficient lighting design.

In 2003, Efficiency Vermont began representing Motor Up and Cool Choice initiatives with Vermont vendors and contractors, rather than using an out-of-state regional representative. Drawing upon internal staff's knowledge of the Vermont business market, Efficiency Vermont has been successful in establishing positive relationships with local trade allies and in communicating messages consistent with Vermont's energy efficiency efforts.

EXISTING BUSINESS FACILITIES

In 2003, Efficiency Vermont served 550 business operators working to upgrade their processes, replace equipment or renovate their buildings. By incorporating energy

efficiency into these improvements, these businesses are expected to see \$19,238,000 in lifetime economic value. Vermont's existing business facilities are diverse, ranging from multi-family residences to large industrial buildings, dairy farms to ski areas, schools to prisons. To meet the varied needs of this market, Efficiency Vermont provides a wide range of services. Some "prescriptive" services are designed to attract a wide variety of business types and sizes and to promote some standard measures with broad applicability. These services offer a simple, easy to use application process. To maximize the ability to help these businesses capture cost-effective opportunities, Efficiency Vermont focuses efforts on customized services tailored to individual business needs. These services include detailed technical analysis, partnering with third parties to procure technical and design assistance, as well as grants and financing to help meet the unique investment criteria of each business.

This customized approach has allowed Efficiency Vermont to better understand how energy efficiency can be integrated into business operations on an ongoing basis while increasing the comprehensiveness of each efficiency project. Efficiency Vermont's success in capturing comprehensive savings in 2003 can be seen in the fact that 20% of its completed custom business projects included a variety of energy efficiency measures across multiple end uses.

In addition to direct project work, Efficiency Vermont developed technological materials to assist businesses in their energy efficiency efforts. These "Tech Briefs" identify efficiency opportunities for improving the bottom line in some of Vermont's key industries. They also provide specific technical and financial information on a variety of efficiency technologies and applications. These Tech Briefs address and are being distributed to:

- The Food Processing Industry
- The Lumber and Wood Processing Industry
- The Primary Metals Processing Industry
- The Quarry, Mineral Processing, and Gravel Crushing Industry

In 2003, Efficiency Vermont implemented a low-interest dairy farm loan service, with financing provided through the Vermont Development Credit Union. Efficiency Vermont also developed and began piloting a broader business energy efficiency loan service through Chittenden Bank. Early participation in both of these financing services has been limited. However, having gained valuable insight and experience regarding delivering alternative financing options, Efficiency Vermont plans to continue to improve and expand these services in order to increase participation in 2004.

Efficiency Vermont also provided standardized rebates to businesses engaged in qualifying prescriptive equipment upgrades. Typically, businesses receive these rebates by working with their suppliers and/or contractors. Contractor and/or suppliers assist in identifying equipment that qualifies for Efficiency Vermont incentives, installing the equipment and then assists businesses in obtaining rebates. To streamline this process and to reach more Vermonters, Efficiency Vermont developed and began distribution of two

new prescriptive incentive forms - one for refrigeration equipment and one for transformers. To help businesses understand their options and to assist refrigeration vendors in promoting energy-efficient upgrades Efficiency Vermont also created a handout that illustrates the opportunities to improve the efficiency of small commercial refrigeration systems. 55% of businesses using the prescriptive service in 2003 were small businesses with annual electric consumption of less than 40,000 kWh per year.

The following table shows the range of actions taken by businesses working with Efficiency Vermont in 2003 to improve existing facilities.

Existing Businesses Facilities					
Facility Type	Efficiency Measures Installed	Customer Investment	Annual Customer Savings	Customer Return on Investment	Lifetime Economic Value
General store	Lighting, refrigeration and controls, hot water and space heat fuel substitution	\$10,000 (innovative financing)	\$2,500	24%	\$17,500
Mixed affordable housing and commercial space	Efficient air conditioning and clothes washers, water saving measures, lighting and occupancy sensors, motors and variable frequency drives, ventilation, comprehensive heating system and shell improvements (Achieved 5-star energy rating)	\$17,000	\$16,000	94%	\$194,000
Large metal processing facility	Compressed air system improvements, including new compressor, cycling dryer, and air distribution upgrades	\$28,000	\$19,000	65%	\$142,000
Plastics injection molding facility	High-efficiency hydraulic molding machines and commercial process dryers	\$61,000	\$26,000	42%	\$200,000

BUSINESS NEW CONSTRUCTION

New construction and major renovation of buildings present key opportunities to embed energy efficiency in Vermont's business infrastructure, benefitting generations to come. Efficiency Vermont has enjoyed a high degree of success in working with design professionals, builders and building owners to decrease the energy demands of new buildings being constructed in Vermont. Most of the design professionals in the state routinely work with Efficiency Vermont on their new building projects.

In 2003, the vast majority of Vermont businesses completing large new construction projects, and an increased number of those completing small new construction projects, worked with Efficiency Vermont. Efficiency Vermont also successfully helped to increase the comprehensiveness of small new construction projects. A key to this success has been the commitment of Vermont business operators to energy-efficient design and construction approaches. These businesses can turn to an increasingly knowledgeable network of design and construction professionals throughout the state who are creating some of the nation's top high performance buildings. Efficiency Vermont is proud of its role in supporting these professionals through:

- The annual Better Buildings By Design conference. This is the region's top conference on high performance buildings, attended by over 700 designers, builders and trades people seeking the latest innovations in energy-efficient approaches.
- The development of new tools for the design and construction process. These tools include the *High Performance Design Guide to Energy-Efficient Commercial Buildings – Vermont and the Northeast Region*, which Efficiency Vermont developed with the American Institute of Architects in 2003. This Guide is scheduled to launch in 2004.
- Training on high performance design and construction, including increasing understanding the Vermont Guidelines for Commercial Construction, and how to go beyond minimum standards to optimize efficiency and create high performing buildings.
- Training for Vermont Department of Buildings and General Services (BGS) staff titled "Code and Beyond." This training is focused on helping BGS understand and go beyond the Vermont Guidelines, as it is now a required minimum standard for all state-funded new construction projects.

One area that Efficiency Vermont focused on and improved in 2003 was direct engagement with building owners as they undertook new construction projects. Efficiency Vermont pursued all appropriate projects in the Construction Industry's "Works In Progress" listing of significant business new construction projects in Vermont. This effort proved very successful in increasing partnerships with Vermont businesses involved in new construction. Efficiency Vermont also had increased success in engaging parties early in the design phase of a project, when the cost-effectiveness of energy-efficient approaches can be optimized.

To better meet the needs and capture opportunities in the business new construction market, Efficiency Vermont began offering businesses a more customized approach to comprehensive new construction. For Vermont’s largest buildings with complex, interactive systems that offer substantial energy-saving opportunities, Efficiency Vermont supported full building simulation modeling. This approach ensures that the interactive effects of systems are fully accounted for, such as the impact of the lower heat from energy-efficient lighting on cooling system sizing. However, with many buildings, comparable levels of comprehensiveness can be achieved with more expedited and less resource-intensive services. In these instances, modeling is tailored to specific measures rather than to the whole building. In 2003, this allowed Efficiency Vermont to capture a greater share of the new construction market, thereby minimizing lost opportunities — particularly among the small buildings typical of much of Vermont construction. For customers not ready to undertake a comprehensive design process, Efficiency Vermont supported them in optimizing the appropriate systems for their buildings with custom project assistance and incentives.

To promote the benefits resulting from an integrated design approach, and to highlight Vermont designers’ and builders’ expertise in creating high performance buildings, Efficiency Vermont partnered with the Vermont chapter of the American Institute of Architects to sponsor a reception, tour, and presentation at one of the buildings constructed with a comprehensive approach in 2003.

At the end of the year, Efficiency Vermont had 22 business new construction projects enrolled in the comprehensive design approach, with four completed projects in 2003. Among the businesses that completed comprehensive construction projects in 2003, were two buildings that now use energy at a 40% lower rate than required by the Vermont Guidelines for Commercial Construction.

The following chart illustrates the range of building types and measures that Efficiency Vermont supported in 2003, in collaborative efforts with the state’s businesses, to reduce the energy demands of new buildings in Vermont.

Business New Construction					
Facility Type	Efficiency Measures Installed	Customer Investment	Annual Customer Savings	Customer Return on Investment	Lifetime Economic Value
Technology design & installation firm	Comprehensive building efficiency measures, including lighting, HVAC, building shell improvements, and related controls	\$63,000	\$17,000	24%	\$156,000

Business New Construction					
Facility Type	Efficiency Measures Installed	Customer Investment	Annual Customer Savings	Customer Return on Investment	Lifetime Economic Value
A large medical facility	Water-cooled chiller, HVAC system, lighting, controls, motors	\$133,000	\$63,000	48%	\$483,000
Non-profit animal shelter	Reduced lighting power density, occupancy sensors, HVAC upgrades	\$4,600	\$2,400	52%	\$26,000
Private, K-8 school	HVAC economizers, demand controlled ventilation, reduced lighting power density and occupancy sensors	\$14,000	\$9,000	64%	\$72,000

TARGETED MARKETS

In addition to efforts in support of existing and new business facilities, Efficiency Vermont targeted specific market areas that have unique opportunities for reducing energy use and energy costs. As these targeted market initiatives include activities within existing and new businesses facilities, the project work that resulted from these efforts is integrated into the existing and new facility work described above. The following discussion highlights some of Efficiency Vermont's targeted activities undertaken in 2003.

Dairy Farms

In 2003, 99 projects were completed at Vermont dairy farms. An important development this year was a low-interest loan program, initiated by Efficiency Vermont, to address the ongoing financial difficulties faced by many Vermont dairy farmers. With no- or low-interest financing covering their costs for energy efficiency measures, farmers have been able to move ahead with projects that lower operating costs. In 2003, fourteen dairy farmers took advantage of this offer to install equipment that will improve the efficiency of their operations. Efficiency Vermont also tested the effectiveness of new ventilation fan technology to identify appropriate applications, with an aim to assist dairy farmers with a more energy-efficient form of ventilation for barns.

Multifamily Housing

Efficiency Vermont continued to work effectively with non-profit housing developers to optimize energy efficiency in the construction and renovation of multifamily, affordable housing. Efficiency Vermont leveraged its ongoing, positive working relationships with these developers to promote implementation of advanced technologies to improve building performance. Efficiency Vermont also partnered with the Vermont Conservation Housing Trust to co-sponsor a training workshop on how to prevent mold in building construction. The training was attended by architects, engineers, builders, and construction specifiers. In 2003, 353 multifamily housing units received 5-star ENERGY STAR ratings for energy efficiency.

Schools

Efficiency Vermont worked closely with the Vermont Department of Education, the Vermont Superintendents Association, and the Vermont School Boards Insurance Trust to create and launch a statewide energy survey of all public, K-12 schools in the state. The survey collected data on facility conditions, such as age, square footage, types of lighting, and other building and energy information. Prior to this survey, there was no centralized database with this information for Vermont schools. As of the end of 2003, the first year in which schools were asked for this information, approximately one-third of all facilities had responded and provided the requested data. Efficiency Vermont will use the data to establish priorities for efforts in the school market.

Ski Areas

Ski areas present significant opportunities for energy savings in commercial, residential, and industrial applications. In 2003, Efficiency Vermont partnered with the Vermont Ski Areas Association (VSAA) to create a survey on mountain operations equipment inventory and systems. This information will help identify the most effective ways to help ski areas to optimize their energy use. Efficiency Vermont also worked with the VSAA to co-sponsor a "Motor Master" training that taught operations employees from six ski areas how to optimize energy efficiency through motor equipment maintenance and appropriate replacement. By the end of 2003, 14 of the state's 17 ski areas had completed at least one project with Efficiency Vermont. The lifetime economic value associated with these ski area efforts is approximately \$28,000,000.

State Buildings

Efficiency Vermont worked with the Vermont Department of Buildings and General Services, which oversees most of the maintenance, renovation, and new construction of state buildings. Efforts were focused upon improving the efficiency and performance of both new and existing facilities. Efficiency Vermont also provided other state agencies and organizations with technical and financial assistance, including the Agency of Transportation, State Colleges, State Parks, State Police, Department of Corrections, and State Army and Air National Guard. In 2003, several projects with various state buildings

were completed that totaled more than \$533,000 in lifetime economic value. In addition, Efficiency Vermont provided technical assistance and training to State Buildings and General Services staff and their design partners, including activities to promote innovative financing options through performance contracting and other positive cash flow models. These achievements lower the cost of maintaining and operating Vermont's state buildings, which is a benefit to all Vermonters.

Water and Wastewater Facilities

During 2003, Efficiency Vermont, the Northeast Rural Water Association and Vermont Technical College co-hosted two training events for water and wastewater operators. The "Basics of Motors, Drives, and Energy Efficiency" was approved by State Water Supply and Wastewater Management divisions for training credit hours toward operator certification requirements. For many class participants, these courses provided the first introduction to formal concepts in energy efficiency and reducing electrical operating costs. Efficiency Vermont pursued additional outreach activities, including presenting information and metered data, at the Green Mountain Water Environment Association's annual conference, on three successful municipal projects.

1.1.2. RESIDENTIAL ENERGY SERVICES

Throughout 2003, Efficiency Vermont served Vermont households by providing services in the following markets:

- Retail Products
- Residential New Construction
- Existing Homes

Efficiency Vermont's 2003 residential energy services resulted in the following benefits to Vermont households: 14,997 MWh of electricity savings, \$13,140,000 of lifetime economic value and 1,779 MW of reduced summer peak demand per year. Lifetime economic value is defined as the present value of the electricity, fossil fuels and water that are saved over the lifetime of the efficiency measures. To achieve these savings, Efficiency Vermont delivered efficiency services to 28,058 Vermont households.

Efficiency Vermont continued to receive national recognition for its service to Vermont households, including:

- U.S. Environmental Protection Agency (EPA) ENERGY STAR awards for Leadership in Energy Efficiency for residential new construction, lighting and appliances as part of a regional effort facilitated by the Northeast Energy Efficiency Partnerships (NEEP) and an ENERGY STAR award for Efficiency Vermont's "Change A Light, Change the World" campaign, part of the EPA's nationwide campaign.
- American Council for an Energy Efficient Economy awards for exemplary programs in residential new construction, lighting and appliances as part of NEEP; and,
- Increasing the penetration of ENERGY STAR qualified products and ENERGY STAR qualified new homes in Vermont markets. According to sales data from national retail chains, Vermont is among the top ten states in the nation for market share of ENERGY STAR qualified room air conditioners, clothes washers and refrigerators. Based on EPA data, Vermont has the second highest state market share of ENERGY STAR qualified homes.

The following sections highlight Efficiency Vermont's accomplishments in the residential markets.

RETAIL EFFICIENT PRODUCTS

As in previous years, Efficiency Vermont promoted ENERGY STAR qualified products and strengthened relationships with retail and wholesale vendors of energy-efficient products. In 2003, Efficiency Vermont encouraged and facilitated Vermonters' purchases of ENERGY STAR qualified compact fluorescent light bulbs, lighting fixtures, ceiling fans, clothes washers, room air conditioners and refrigerators. In addition, as part of its

effort to increase the availability of ENERGY STAR qualified fixtures, Efficiency Vermont co-sponsored a design competition for high quality efficient lighting fixtures and introduced a retail price buy-down approach for lighting incentives. Efficiency Vermont also partnered with local organizations in several towns to help educate residents and businesses about energy efficiency and the benefits of purchasing ENERGY STAR qualified products.. Throughout the year, Efficiency Vermont encouraged Vermonters, through its website, co-op advertising with retail partners and newspaper and radio advertisements, to purchase energy-efficient ENERGY STAR qualified products.

Efficiency Vermont continued its outreach to, and enrollment of, retailers and wholesalers of energy-efficient products. At year-end, more than 200 Vermont retail businesses were enrolled as ENERGY STAR qualified lighting and appliance partners. Efficiency Vermont supported these partners with training for sales staff, point-of-sale promotional materials, cooperative advertising and financial incentives (primarily to consumers).

To help offset the cost of energy-efficient products, Efficiency Vermont provided instant coupons for the purchase of ENERGY STAR qualified compact fluorescent light bulbs and fixtures, and provided mail-in rebate forms for the purchase of ENERGY STAR qualified clothes washers. From mid-April to mid-July, Efficiency Vermont also partnered with manufacturers of ENERGY STAR qualified clothes washers in the nationwide, "Double Your Savings" promotion, during which manufacturers matched Efficiency Vermont's \$50 incentive for the purchase of an ENERGY STAR qualified clothes washer. Efficiency Vermont also worked cooperatively with retail partners to facilitate seasonal purchases of ENERGY STAR qualified room air conditioners (May 1-July 31) and refrigerators (July 1 – Sept 30). A sales incentive also was made available to salespeople for ENERGY STAR qualified refrigerators sold from October to December. While a financial incentive was originally planned for newly introduced ENERGY STAR qualified freezers, Efficiency Vermont representatives learned from appliance dealers that none of the new higher efficiency freezers were yet being stocked in Vermont stores. Efficiency Vermont continues to work with appliance dealers to encourage them to bring these freezers into the Vermont retail market.

Efficiency Vermont undertook special efforts to address the limited selection of energy-efficient lighting fixtures available to Vermont consumers. Efficiency Vermont was a co-sponsor with the Council for Energy Efficiency and the American Lighting Association, in supporting an international competition for the design and manufacture of energy-efficient lighting fixtures. This competition resulted in the selection of eleven winning designs in 2003; the first year of this two-year design competition. In 2004, manufacturers will produce the fixtures and develop marketing plans to distribute and sell them.

Also during 2003, Efficiency Vermont provided seven Vermont lighting showrooms with an initiative which enabled them to increase the number and variety of energy-efficient fixtures they stock and display. Although the initial sales of fixtures have been limited,

Efficiency Vermont is continuing to work with these showrooms and is seeking additional ways to stimulate the sale of energy-efficient fixtures.

In October, Efficiency Vermont originated and supported the “Change A Light” Challenge for the Village of Poultney, an event that highlighted all of Efficiency Vermont’s objectives for the retail market: Partnerships with local retailers; the promotion of ENERGY STAR qualified products; incentives to enable consumers to overcome first cost barriers to their purchase of energy-efficient products; and general public education about the benefits of energy efficiency. Working with Williams True Value Hardware, a retail partner in Poultney, and with the students of Green Mountain College and the administration of the Town of Poultney, Efficiency Vermont challenged the residents of Poultney to replace at least one incandescent light bulb in their homes with an energy-efficient compact fluorescent light (CFL). Efficiency Vermont encouraged residents to participate by providing information about the ways that this easy action could save energy, save money and reduce power plant emissions.

Poultney residents not only accepted the challenge, they also purchased more than 3,000 additional CFLs with incentives from Efficiency Vermont. If every Vermont household adopted this simple switch, Vermonters would save enough electricity to light more than 14,000 households for a year.

This success was due to the support and encouragement of Governor James Douglas; Williams True Value Hardware; which facilitated providing a free bulb to every participating household; and Green Mountain College students and the administration of the Town of Poultney, who participated in a range of promotional activities. This demonstration of partnership, community support and energy efficiency action supports Efficiency Vermont’s goals of transforming Vermont’s retail market for energy-efficient products as well as expanding Vermonters’ support for energy efficiency. The event attracted the attention of media throughout Vermont, which further promoted the Change-a-Light Challenge statewide. As a result of this successful event, the US Environmental Protection Agency recognized Efficiency Vermont as an ENERGY STAR Partner of the Year for the “Change A Light, Change the World” campaign.

The U.S. Environmental Protection Agency (EPA) also acknowledged Efficiency Vermont’s contribution to the national energy efficiency effort by selecting the Efficiency Vermont Lighting Guide as the source document for their web-based “ENERGY STAR Light Fixture Guide.” This guide is available at:
www.energystar.gov/index.cfm?c=fixture_guide.pr_fixtures_guide_index

In 2003, Efficiency Vermont initiated a pilot activity to simplify the current process of lowering reducing the retail price of high-efficiency lighting products. This limited pilot replaces the current instant coupon for consumers with an incentive payment to lighting manufacturers and/or retailers. Although this approach reduces Efficiency Vermont’s ability to track customer purchase information, it increases the efficiency of incentive processing and reduces the costs for processing lighting incentive data.

RESIDENTIAL NEW CONSTRUCTION

Efficiency Vermont's residential new construction services focus upon improving the performance and energy efficiency of Vermonters' new homes. 2003 marked the first year that these services were available to all builders and buyers of new homes in Vermont, due to the expansion of these services to include members of the Washington Electric Cooperative.

As in previous years, Efficiency Vermont reached out to builders and buyers of new homes to encourage their adoption of energy-efficient approaches. Efficiency Vermont provided technical assistance, plan reviews, on-site inspections, performance testing and both ENERGY STAR labeling and energy code assistance. The year also marked the completion of a record number of ENERGY STAR qualified single family homes. More than 300 such homes were performance tested to be 20% or more energy-efficient than specified by the Vermont Residential Building Energy Standard, and to contain energy-efficient lighting, improved ventilation and combustion air safety measures. Homes completed in 2003 also included a greater number of energy-efficient lighting fixtures than in homes built in prior years.

The increasing penetration of ENERGY STAR qualified homes into Vermont's residential new construction market has been acknowledged by the U.S. Environmental Protection Agency. The EPA recognized Efficiency Vermont's efforts in sponsoring over 500 ENERGY STAR qualified homes and for achieving the second highest state market share of ENERGY STAR qualified homes in the nation. The American Council for an Energy Efficient Economy also recognized Efficiency Vermont's residential new construction services as exemplary and as a model for other states to follow.

To increase awareness of the benefits of an ENERGY STAR qualified home among both builders and buyers, Efficiency Vermont continued its educational outreach efforts in 2003. These outreach efforts included

- Efficiency Vermont's Better Buildings by Design 2003 Conference - the region's top new construction conference, where Vermont's designers and builders gathered to learn about cutting-edge approaches to building durability, efficiency and value from national leaders in the field;
- Sponsorship of several training workshops at building supply stores (Gregory Supply in Burlington, Parker & Stearns in Johnson and H. Greenberg & Son in Bennington);
- Presentations to state-wide chapters of Habitat for Humanity;
- Efficiency Vermont's presence at Home and Builders' Shows; and,
- Working in close association with the Home Builders Associations of both Northern and Southern Vermont.

EXISTING HOMES

Efficiency Vermont's core efficiency services to the existing homes market consist of the following:

- **Low-Income Single Family:** Efficiency Vermont continued the delivery of electric efficiency services to low-income Vermont households through its partnership with the five agencies that deliver the statewide Weatherization Assistance Program. Eligible customers received services that included the installation of ENERGY STAR qualified light bulbs and fixtures; replacement ENERGY STAR qualified refrigerators for inefficient and high usage refrigerators; waterbed insulation pads or mattress replacements; and, when cost effective, the replacement of electric domestic hot water heaters and electric space heating systems with units using less costly fossil fuels.
- **Customer Service:** In addition to providing energy efficiency information, via phone and e-mail, Efficiency Vermont provided Vermonters with tools to empower them to take positive action to lower their energy usage. Staff distributed do-it-yourself energy audit compact discs and loaned meters that enabled people to measure individual equipment usage. Efficiency Vermont provided an energy checklist to enable households to conduct their own home energy assessments. Efficiency Vermont also distributed printed Energy Saving Tips and started the development of materials for Vermonters who use electric water heaters, as well as materials to address the unique needs of renters.
- **High Usage Households:** Vermont households with high electric usage (typically 7000 KWh or more per year) may be candidates for electric efficiency improvements that can significantly reduce their energy costs. Through customer inquiries and Efficiency Vermont's outreach efforts, high usage households received a range of services including, as applicable: Technical assistance; energy saving tips; on-site energy audits with direct installation of efficient lighting and hot water conservation measures; and financial incentives for undertaking cost-effective efficiency improvements. By using these incentives to reduce the purchase price, households can choose to replace their electric hot water and/or space heating system, make improvements such as insulation and air sealing and/or retire their inefficient refrigerator early and replace it with an ENERGY STAR qualified model.

In addition to these core efficiency services, Efficiency Vermont initiated steps in the following areas to expand the efficiency services available to customers in the Existing Homes market:

- **Furnace Fans:** Improvements in electric motor design have created an opportunity for Vermonters to lower energy costs by utilizing energy-efficient furnace fan motors. In 2003, Efficiency Vermont completed a technical review of high efficiency furnace fan motors in high efficiency forced air heating systems. Efficiency Vermont then worked with Vermont Gas Systems and the Consortium for Energy Efficiency to determine the benefits of this technology for Vermont residents. As a result, in 2004, Efficiency Vermont will offer incentives for the purchase/installation of high efficiency forced air heating systems with high efficiency fan motors
- **Central Air Conditioning:** Market information shows that the increase in central air conditioning systems being installed in Vermont homes has an impact on peak summer energy demand. Therefore, Efficiency Vermont determined that high efficiency central air conditioning presents an opportunity for cost-effective energy savings. As a result, in 2004, Efficiency Vermont will provide incentives and contractor training for the sale/installation of ENERGY STAR qualified central air conditioning equipment.
- **Home Performance Contracting:** Efficiency Vermont has identified a need for comprehensive efficiency services to address the broader scope of residential energy use. Therefore, using a model for comprehensive home performance (retrofit services) implemented in New York, Efficiency Vermont has begun to adapt this model for Vermont use. Using the Building Performance Institute (BPI) of Albany, New York performance specifications that have been adopted by several states, Efficiency Vermont had five staff members complete an extensive training program to become BPI certified technicians. Efficiency Vermont's plans for 2004 call for this training and certification to be provided to Vermont contractors. This will enable them to provide comprehensive home assessment and installation services. In addition to providing the training and certification, Efficiency Vermont will work with these contractors to help them market their enhanced skills.

* Burlington Electric Department (BED) administers its own services & initiatives. BED reports its results separately to the Vermont Public Service Board.

EEU Expenditures	
EVT program and administration expenditures	\$12,957,903
Contract Administrator, Fiscal Agent, DPS Evaluation	\$565,294
EVT Performance-based Fee	\$410,000
Total EEU Expenditures	\$13,933,198

2.1.19. 2003-2005 Minimum Performance Requirements

Minimum Requirement		Results as of 12/31/03
1	Gross Electric Benefits to Energy Efficiency Utility Cost ratio must be greater than 1.0.	3.02
2	15% of Efficiency Vermont's total spending must be for Low Income Single Family, Low Income Multifamily Retrofit and Low Income Multifamily New Construction services and initiatives	18.84%
3	40% of total non-residential accounts with savings must be accounts with annual electric usage of 40,000 kWh per year or less	44.41%

The Efficiency Vermont contract is based on three-year cumulative budgets and savings goals.

Appendices

4.1. CUSTOMER CREDIT PROGRAM

4.1.1. NARRATIVE

The Customer Credit program (CCP) provides an alternative program path for large businesses that meet program eligibility criteria. The program enables customers with the capability and resources to identify, analyze, and undertake efficiency projects and self-implement energy efficiency measures with financial assistance from Efficiency Vermont (EVT). CCP customers can apply for financial incentives for any retrofit or market-driven project that saves electrical energy and passes the Vermont societal cost-effectiveness test. Once a customer elects to participate in CCP, that customer is no longer eligible to participate in other EVT programs.

All projects must be customer initiated. In addition, the customer or its contractors must complete all technical analysis. Customers can receive cash incentives capped at 70% of their projected two-year contribution to the statewide energy efficiency fund at any time. Customers can draw on contributions from the current year and either the previous or ensuing year. Market-driven projects are eligible for incentives equal to 100% of the incremental measure cost. For retrofit projects, customers can receive incentives that reduce the customer payback time to 18 months.

Eligible Market

To be eligible for CCP, customers must:

- Never have accepted cash incentives from any Vermont utility Demand Side Management (DSM) program;
- Show a corporate commitment to energy efficiency by participation in the United States Environmental Protection Agency's Climate Wise program, or currently active similar program as determined by the PSB; and
- Have ISO 14001 certification.

4.1.2. Customer Credit - Summary

4.2. DEFINITIONS AND END NOTES

4.2.1. ANNUAL REPORT TABLES OVERVIEW

1 – Section 4.2.2. includes a list of definitions for items in the Annual Report tables. Section 4.2.3. includes notes for specific items in the tables. Section 4.2.4. provides a description of the re-mapping of Efficiency Vermont (EVT) Core Programs (2000-2002) to EVT Core Market Services and Initiatives (2003-2005).

2 - Data items for which data is not available are labeled “nav”. Data items for which data is not applicable are labeled “nap”.

3 - Except where noted, EVT expenditures data in this report were incurred during the period January 1, 2003 through December 31, 2003. Similarly, measure savings are for measures installed during the period January 1, 2003 through December 31, 2003.

4 - EVT costs include an operating fee of 1.45%, as specified in the EVT contract.

5 - Data for “Incentives to Participants” in Tables 2.1.2., 2.1.3., 2.1.8., 2.1.12., 3.1.1., 3.1.6., 3.1.11., 3.1.12., 3.1.17., 3.1.22., 3.1.27., 4.1.2. are based on financial data from Vermont Energy Investment Corporation's (VEIC) accounting system, MAS90. “Participant Incentives Paid” and “EVT Incentives” on all other tables are based on data entered in EVT’s FastTrack tracking system and include the operating fee cited above.

6 - “Annualized MWh Savings (adjusted for measure life)”, “Winter Coincident Peak kW Savings (adjusted for measure life)” and “Summer Coincident Peak kW Savings (adjusted for measure life)” on Tables 2.1.2. and 2.1.3. are provided for informational purposes only. This data includes only savings for measures that have not yet expired during the reporting period. It excludes savings for measures that have reached the end of their specified lifetime.

7 - Program Planning costs have been rolled into “Services and Initiatives” for 2003-2005. For 2000-2002, Program Planning costs were reported as a separate line item. In Table 2.1.2. and Table 2.1.3, Program Planning costs refer to data reported prior to 2003.

8 – Multifamily costs and savings are reported under “Current Year 2003” and “Cumulative starting 1/1/03” on Tables 2.1.8., 3.1.1., 3.1.6. (Business tables) and under “Prior Year” on Tables 2.1.12, 3.1.12. (Residential tables) because multifamily data were reported in the Residential Energy Services sector for 2000-2002 and in Business Energy Services for 2003-2005. See Section 4.2.2. for Re-Mapping of Programs to Market Services and Initiatives.

9 – “Prior Year” data in the 2003 Annual Report correspond to 2002 Core Program data. Since 2002 Core Programs do not match 2003 Core Market Services and Initiatives, an effort has been made so that “Prior Year” data is consistent with “Current Year” data which allows a fair comparison of data between time periods. Below is a guide showing 2003 Annual Report data tables to the left with corresponding 2002 Core Programs data to the right for the “Prior Year” column.

2003-2005 Annual Report Table

2002 Core Program

3.1.1. Business New Construction	CEO New Construction Program
3.1.6. Business Existing Facilities	CEO Market Opportunities Program + C&I Emerging Market Program
3.1.11. Business Initiatives	No "Prior Year" data reported
3.1.12. Residential New Construction	Residential New Construction Program
3.1.17. Efficient Products	Efficient Products Program
3.1.22. Residential Existing Buildings	Low Income Multifamily Program + Low Income Single Family Program + Residential Emerging Markets Program
3.1.27. Residential Initiatives	No "Prior Year" data reported

4.2.2. DEFINITIONS AND REPORT TEMPLATE

The tables that appear in the EVT Annual Report 2003 were developed as a collaborative effort between EVT, the Vermont Department of Public Service, the Energy Efficiency Utility Contract Administrator and Burlington Electric Department. Two major table formats, markets and services summary and breakdown tables are used throughout the report. The definitions of the data reported in these tables are provided on the pages that follow. Data items identified with a number and parenthesis are identified in the narrative that follows.

	<u>Prior</u> <u>Year</u> (1)	<u>Current</u> <u>Year</u> <u>2003</u> (2)	<u>Projected</u> <u>Year</u> <u>2003</u> (3)	<u>Cumulative</u> <u>starting</u> <u>1/1/03</u> (4)	<u>Cumulative</u> <u>starting</u> <u>3/1/00</u> (5)
# participants with installations	(6)				
# participants with analysis	(7)				
# participants with analysis and installations	(8)

Committed Incentives	(32)

Annualized MWh Savings (adjusted for measure life)	(33)
Winter Coincident Peak kW Savings (adjusted for measure life)	(34)
Summer Coincident Peak kW Savings (adjusted for measure life)	(35)

X.X.X. Breakdown Report

End Use	# of Participants	Net MWH Saved	Gross MWH Saved	Net Lifetime MWH Saved	Net Winter KW Saved	Net Summer KW Saved	Net Other Fuel MMBTU	Net Water CCF Saved	Participant Incentives Paid	Participant Costs
	(36)	(37)	(38)	(39)	(40)	(41)	(42)	(43)	(44)	(45)

Footnotes for the report table templates:

(1) Activity for the prior reporting year. Multifamily costs and savings are reported in Residential Energy Services for 2000-2002 and in Business Energy Services in 2003-2005. See Section 4.2.4. RE-MAPPING of PROGRAMS TO MARKET SERVICES AND INITIATIVES.

(2) Activity for the current reporting year. For savings this figure will be the estimated savings for measures actually implemented for the current report period. Savings are reported in MWh, at generation and net of all approved adjustment factors, except as otherwise noted.

(3) Projected costs for Year 2003 are estimates only and provided for informational purposes. The EVT contract is based on three-year cumulative budgets and savings goals, therefore EVT does not have annual budget or annual savings goals.

(4) Data reported for the contract period starting January 1, 2003 through December 31, 2003.

(5) Data reported for the contract period starting March 1, 2000 through December 31, 2003.

(6) Number of customers with installed measures. For the period 2000-2002, “# participants with installations” is counted by summing unique utility premises for all but multifamily projects. For multifamily projects, “# participants with installations” is counted by summing unique dwelling units. For “Current Year 2003”, “# participants with installations” is counted by summing unique project sites for all projects. Under “Cumulative starting 1/1/03”, customers are counted once, regardless of the number of times this customer participates in EVT services during 2003-2005. Under “Cumulative starting 3/1/00”, a customer will be counted twice if that customer has received EVT services during 2000-2002 and again in 2003-2005.

(7) Number of customers with custom analysis during the current report period. This reflects the number of customers that initiated a new custom project during the reporting period and where measures may not have been installed.

(8) Number of customers who had analysis at any time and have installed measures during the reporting period. This reflects the number of customers that completed a custom project during the reporting period.

(9) Costs include general management, budgeting, financial management and management of the requirements of the EVT contract. These costs are not broken out by market. This cost category is included on Tables 2.1.2., 2.1.3 only.

(10) Management and other management related costs directly associated with implementation work.

(11) Costs related to program design, planning, program screening and other similar functions. Program Planning costs refer to data reported prior to 2003.

(12) Costs related to marketing, outreach, customer service and business development.

(13) Costs related to Information Systems development and maintenance. These costs are not broken out by market. This cost category is included on Tables 2.1.2., 2.1.3 only.

- (14) Subtotal of all operating costs detailed in the categories above (9) + (10) + (11) + (12) + (13).
- (15) Direct payments to participants to defray the costs of specific efficiency measures.
- (16) Incentives paid to manufacturers, wholesalers, builders, retailers or other non-customer stakeholders that do not defray the costs of specific efficiency measures.
- (17) Subtotal reflecting total incentive costs, (15) + (16).
- (18) Costs related to conducting analyses, preparing the package of efficiency measures, contract management and post-project follow-up.
- (19) Costs related to educational or other support services provided to entities other than individual participants, such as trade allies, manufacturers, wholesalers, builders, and architects.
- (20) Subtotal reflecting total technical assistance costs, (18) + (19).
- (21) Total costs incurred by Efficiency Vermont. All costs in nominal dollars, (14) + (17) + (20).
- (22) Total costs incurred by participants related to EVT or utility activities. This category includes the participant contribution to the capital costs of installed measures and to specific demand-side-management (DSM) -related services, such as technical assistance or energy ratings.
- (23) Total costs incurred by third parties (i.e., entities other than EVT, utilities and participants) directly related to EVT or utility DSM activities. This category includes contributions by third parties to the capital costs of installed measures and to specific DSM-related services, such as technical assistance or energy ratings.
- (24) Total cost of services and initiatives, (21) + (22) + (23).
- (25) Annualized MWh savings at generation, net of all approved adjustment factors (e.g., free riders, spill over, line loss) for measures installed during the current report period.
- (26) Lifetime estimated MWh savings for measures installed during the current reporting year, at generation and net of all approved factors. (Typically, estimated annualized savings times the life of the measure).
- (27) Total Resource Benefits (TRB) savings for measures installed during the current reporting year. TRB includes gross electric benefits, fossil fuel savings and water savings. It is stated in 2003 dollars throughout the entire report. Prior year data have been adjusted for 2003 dollars by escalating the pre-2003 TRB by 6.8% discount rate for 3 years and inflating TRB by 7.62% (% CPI change July 2000 - July 2003) to convert to 2003 dollars.
- (28) Estimated impact of measures at time of winter system peak, at generation, net of adjustment factors.
- (29) Estimated impact of measures at time of summer system peak, at generation, net of adjustment factors.
- (30) Annualized MWh savings per participant, net at generation, (25) / (6).
- (31) Average lifetime, in years, of measures weighted by savings, (26)/(25).
- (32) Incentives which are not yet paid to a customer but where there is a signed contract as of December 31, 2003 for projects which will complete after December 31, 2003.
- (33) Adjusted Annualized MWh savings at generation and net of all approved adjustment factors (e.g., free riders, spill over, line loss) for measures installed during the current report period. This data includes only savings for measures that have not yet expired during the reporting period. It excludes savings for measures that have reached the end of their specified lifetime.

(34) Adjusted impact of measures at time of winter system peak, at generation, net of adjustment factors. This data includes only savings for measures that have not yet expired during the reporting period. It excludes savings for measures that have reached the end of their specified lifetime.

(35) Adjusted impact of measures at time of summer system peak, at generation, net of adjustment factors. This data includes only savings for measures that have not yet expired during the reporting period. It excludes savings for measures that have reached the end of their specified lifetime.

Items 36-45 reflect installed measures for the current reporting period.

(36) Number of customers with installed measures within the end use, utility or county grouping.

(37) Annualized MWh savings at generation, net of all approved adjustment factors (e.g., free riders, spill over, line loss) for measures installed during the current report period. This number is the same as that reported on line (25).

(38) Annualized MWh savings, gross at the customer meter.

(39) Lifetime estimated MWh savings for measures installed during the current reporting period, at generation and net of all approved factors. This number is the same as that reported on line (26).

(40) Estimated impact of measures at time of winter system peak, at generation, net of adjustment factors. This number is the same as reported on line (28).

(41) Estimated impact of measures at time of summer system peak, at generation, net of adjustment factors. This number is the same as that reported on line (29).

(42) MMBtu estimated to be saved (positive) or used (negative) for alternative fuels as a result of measures installed in the end use.

(43) Water saved (positive) or used (negative) due to measures installed in the end use.

(44) Incentive EVT pays to participants for measures installed. This number is the same as that reported on line (15). See note 5 in Section 4.2.1. for difference in source data in reporting (15) and (44).

(45) Costs incurred by participants related to EVT or utility activities. This number is the same as that reported on line (22).

4.2.3. TABLE END NOTES

2.1.2., 2.1.3., 2.1.8., 2.1.12., 3.1.1., 3.1.6., 3.1.11., 3.1.12., 3.1.22., 3.1.27.

[a] As a result of the redesign of EVT's service offerings for 2003-2005, Core Programs have been reorganized into Core Market Services and Initiatives as described in the VEIC Contract Attachment I, Section II. To make sense of the new configuration, see Section 4.2.4. RE-MAPPING of PROGRAMS TO MARKET SERVICES AND INITIATIVES.

2.1.2. Services and Initiatives including Customer Credit, 2.1.3. Services and Initiatives including Customer Credit

[b] The number of participants in Tables 2.1.2. and 2.1.3. in column "Cumulative starting 3/1/00" represents an aggregate for 2000-2002 (determined by summing unique utility premises) and for 2003-2005 (determined by summing unique project sites). The different participant counting methodologies as approved by the Contract Administrator and the Vermont Department of Public Service results in an overstatement of the participants who installed measures in both the 2000-2002 period and the 2003-2005 period. For 2003, this overstatement is approximately 8% (8,000) of the reported cumulative participants.

2.1.7. Efficiency Vermont Services & Initiatives – Total Resource Benefits

[a] Net lifetime water savings is the net annual measure water savings times the measure lifetime and net lifetime fossil fuel savings is the net annual measure fossil fuel savings times the measure lifetime.

2.1.18. Cumulative Distributions by Utility Service Territory

[a] BED administers its own services and initiatives and reports separately to the Vermont Public Service Board. The charges paid by BED represent contributions towards EVT emerging markets initiatives, EVT Services costs and some incidental services provided by EVT in the BED service territory.

4.2.4. RE-MAPPING of PROGRAMS TO MARKET SERVICES AND INITIATIVES

As a result of the redesign of EVT’s service offerings in 2003-2005, EVT Core Programs have been reorganized into EVT Core Market Services and Initiatives. The reasons for this reorganization from “Programs” to “Services and Initiatives”, as stated in the Contract, are the following: to align EVT’s activities more closely with customer’s needs, to establish a more comprehensible segmentation of the markets in order to improve the delivery of services, for improved reporting and market assessment, to ameliorate coordination between current program offerings and align EVT’s work more closely with its internal management structure.

Following is a diagram of the 2000-2002 Core Programs and their relationship to the 2003-2005 Core Market Services and Initiatives. Core Programs under 2000-2002 and Core Market Services and Initiatives under 2003-2005 are in **bold** font. Tracks are in regular font.
